

xPERT eCampus

How do you effectively deliver learning to a distributed organization?

Today's organizations are increasingly challenged to maintain a well-trained workforce in order to stay competitive and meet ever-changing business requirements. Ensuring that people have the right knowledge and skills when they need them requires a strategy that is focused on continuous training and the ability to apply acquired knowledge against job requirements. As organizations become increasingly distributed, learning programs need to be delivered in the most efficient and cost-effective way possible, without sacrificing quality in the learning experience.

Collaboration Architects' xPERT eCampus solution is designed to address the learning needs of today's distributed workforce.

xPERT eCampus enables organizations to provide training to its workforce, regardless of location, in an online campus environment designed and built to enable optimal learning, while reducing travel, facilities, and other instructor led training (ILT) costs.

eLearning solution that supports your training objectives

xPERT eCampus is a highly configurable web-based learning environment that is customized to fit the way people learn and interact, coupled with the tools necessary to support your learning objectives.

xPERT eCampus extends training and educational capabilities across the enterprise by enabling a broader mix of courseware to be delivered in a way that increases a learner's ability to apply skills to the job. xPERT eCampus integrates web-based training models with online group-based learning activities, enabling higher levels of knowledge transfer than traditional training methods.

Why xPERT eCampus is the right solution

- Gives organizations a flexible and cost-effective alternative to traditional learning approaches.
- Provides tools for monitoring and measuring your training program effectiveness.
- Reduces travel, facilities, and other associated physical training costs.
- Reaches more people throughout the organization.
- Delivers online training in a format that maps best learning practices online.

About Collaboration Architects

Collaboration Architects is a leading provider of online workplaces for virtual teams, e-Learning programs, and business communities. Collaboration Architects' solutions are designed around the way people communicate, share information, and collaborate in order to get work done. We blend critical work processes, people issues, and right technology to create effective online workspaces that enhance your business outcomes.

Engaging learning environment

- Integrate rich multimedia web-based training to begin the learning experience.
- Interact with other learners in facilitated workshops and discussion groups.
- Reinforce learning with coaching rooms and action planners.
- Organize your training curriculum into sessions that can occur over time.

Rules-based eLearning

- Online campus that houses all learning activities and provides structured processes for learning over time.
- Templates allow your online learning environment to be designed quickly, without the need for time-consuming and costly programming.
- Our Blended eLearning Methodology is built on sound Online Instructional Design principles to ensure that learning activities support your objectives.

Easy to use eLearning dashboard

- Navigation is made easy with a customizable dashboard that clearly displays sessions and associated activities, so you always know where you are in the program.
- A Gantt chart lets you know when you are supposed to complete each activity.
- Facilitators and coaches can generate detailed program reports to track learners' progress and performance.

Integrates easily with other learning tools and technology

- Links to web-based training courses (e.g. Achieve Global, Ninth House, Frontline Group, etc.) directly or through your existing Learning Management Systems.
- Incorporates same-time meetings via MeetingPlace or other online meeting technology.
- Integrates multimedia-training capabilities created with most standard tools (Flash, Adobe Acrobat PDF, Microsoft Office, Video and Audio Streaming).

A roadmap for success

To ensure our clients obtain optimal usage levels in the xPERT eCampus online campus environment, Collaboration Architects offers a comprehensive suite of professional services, including instructional design, development, and support.

Collaboration Architects believes an effective online learning program is comprised of a sound learning model, blended modes of instruction, appropriate instructional design, and a systematic approach for execution. Our Blended eLearning approach incorporated with the xPERT eCampus solution ensures an optimum learning experience.

Our facilitation services focus on creating an environment that supports the nature of learning to be done, as well as handle special situations should they emerge. In addition, our services help to monitor usage and provide activity reports.

Please refer to our End2End Methodology for more information.
